

<p>Slate</p> 	<p>a metamorphic rock that splits easily into layers and is used for roofs</p>
<p>Marble</p> 	<p>a kind of limestone that can have different colours in patches and can be highly polished used for monuments</p>
<p>Chalk</p> 	<p>a soft white or grey sedimentary rock used for writing on blackboards</p>
<p>Granite</p> 	<p>very hard igneous rock used for buildings</p>
<p>Sand</p> 	<p>small grains of rock or minerals found on beaches, in deserts and in soil</p>
<p>Clay</p> 	<p>fine-grained earth, soft when moist and hard when baked, used to make bricks and clay</p>
<p>Sandstone</p> 	<p>rock made up of particles of sand that is easy to cut into blocks used for building</p>
<p>Pumice</p> 	<p>a very light rock with holes in it formed when lava hardens used for scrubbing</p>

Stone

the hard substance that rocks are made of or a small piece of rock. Stone is used for building

Brick

a rectangular block of clay that is baked until it is hard and is used for building

Concrete

a mixture of cement, sand and water that hardens and is used in building

Soil

top layer of Earth made up of tiny bits of rock and dead decayed material

Igneous

rock formed as molten rock (lava from a volcano) cools and hardens

Sedimentary

rocks formed from material worn away and transported by water, wind or ice

Metamorphic

rock changed by heat and pressure
