T: carry out a cost - benefit analysis

Things to think about:

- Transport infrastructure (roads, railways, buses, tubes etc)
- Jobs
- Cost
- Local community
- Pollution
- Noise
- Traffic
- Parking
- Overcrowding in London
- Convenience (being able to get to places quickly)
- Land needed for building the Runway

In your book you need to draw and complete each table, explaining what you write

Extra runway at Heathrow

Cost	Benefit
<ul style="list-style-type: none">• Increased traffic because people will drive to the airport (S + Env)	

High-speed rail link

Cost	Benefit
<ul style="list-style-type: none">•	<ul style="list-style-type: none">•

Now for each cost and benefit classify it as:

- Social (write 'S' in brackets)
- Economic (write 'Eco.' in brackets)
- Environmental (write 'Env.' in brackets)

Remember that each advantage and disadvantage can be more than one of these.

e.g. increased traffic has a social cost because it means people are more likely to be knocked down AND an environmental cost because it causes more pollution.
