

**Date**

**T: make sentences correctly**

Rewrite these paragraphs so that they stick to the following 3 rules:

- use a full stop and a capital letter every time you take a breath
- don't start sentences with 'and', 'but', 'so' or 'because'
- only use 'and', 'but' or 'so' once in each sentence

### **Metal**

Metal is usually shiny and is used to make things like planes and it is good for making things that aren't supposed to let water through because it is waterproof but it does rust and some types of metal like steel and iron are magnetic but most other types of metal aren't magnetic

### **Plastic**

Plastic comes in many different colours and is a man-made material so it doesn't grow out of the ground like wood and it is used for making bottles and it is normally smooth but it can be rough and it can be transparent (see through) but it can also be opaque (not see through) and it is usually strong

### **Fabric**

Fabric is what your clothes are made from so it is softer than other materials because this makes it comfortable to wear and some types of fabric are wool and cotton but there are lots more different types and fabric is flexible which means it can be bent and some fabrics are smooth but other fabrics are rough

Now make up your own paragraphs about glass, stone and wood.
